

CARNAGE®

DRY CONCENTRATE

SUPERCHARGE YOUR RESIDUE DECOMPOSITION WITH CARNAGE® DRY CONCENTRATE

CARNAGE® Dry Concentrate is a potent blend of fungal and bacterial micro-organisms designed to decompose cellulose and lignin - the key structural components of plants. This natural breakdown facilitates easier field management and enriches the soil with essential nutrients. Additionally, the product degrades pesticide residues and allelopathic compounds, promoting healthier fields and better crop rotation. The micro-organisms enhance the availability and uptake of Nitrogen, Phosphorus, and Potassium, potentially boosting crop yields.

MORE NUTRIENTS - BETTER WORKABILITY - BETTER SOIL HEALTH

DIRECTIONS FOR USE

Grow Source CARNAGE® Dry Concentrate is designed to break down harvest residues and is best applied after harvest or towards the end of the growing season. It can be applied in furrow or broadcast and mixed with water, animal slurry, fertilizers, or plant protection products. It is broadly compatible with non-bacterial inputs, but a jar test is recommended to check mixture compatibility. Apply within 24 hours after mixing.

EXPERIENCE THE BENEFITS

Degradation pesticide residues and allelopathic compounds.

Reduces field residue strength for easier field workability.

Facilitates microbial & fungal nitrogen fixation and solubilization of Phosphorus and Potassium

Releases nutrients from crop residues back into the soil.

APPLICATION RATE

The minimum recommended rate is 100 grams per acre mixed with at least 10 gallons of water. For optimal results, use more water or apply during rainfall for better soil penetration. Higher rates may be beneficial depending on field conditions. A 5 kg bucket treats 50 acres at 100 grams per acre. For smaller areas, measure 100 grams or approximately 5.5 fl oz of dry powder per acre.
